

RANGECLARITY · NEXT SPRINT · PAID BETA ACCESS LOOP

Sprint 1 — Access Loop + Core Value

JUN 20 → JUL 7, 2026 · 18 DAYS · ONE COMPLETE JOURNEY

The practical, day-by-day execution book for the sprint that matters most now. Mission: **prove RangeClarity can become a real product, not just a visual idea** — a user can land, understand the offer, register, complete a sandbox payment, receive verified access, and see one clear product-value screen.

18

DAYS

Jun 20 - Jul 7, 2026

10

CORE TASKS

audit to ship, sequenced

1

JOURNEY

land to verified value

Sandbox

PAYMENTS

test mode only - no live money

The one loop to prove

SPRINT GOAL

A user can land on the site, understand the offer, register, complete a sandbox payment, receive verified access, and see one clear product-value screen or TradingView onboarding flow.

Success is the **whole loop with no dead ends** — in sandbox, on mobile and desktop.

MISSION

Prove RangeClarity can become a real product, not just a visual idea.

HARD CONSTRAINT

Sandbox / test payment only. No live payments enabled without explicit founder approval.

What exists now

AREA	STATE	EVIDENCE IN THE REPOSITORY
Core indicator	BUILT	RangeClarity_Core.pine — 465 lines, @version=6, 19 inputs/visuals. The deliverable customers pay for.
Landing site	BUILDS	Next.js 15 + React 19 + TS 5; typecheck passes. Live homepage = "Codex Premium Hero".
Design system	PRESENT	app/globals.css tokens (void bg + neon accents); reusable components in components/.
Legal pages	PARTIAL	terms + privacy exist (educational + financial disclaimers) — worded around "waitlist".
Waitlist capture	PARTIAL	lib/waitlist.ts + .data/waitlist.jsonl; functional form only on an archived design.
Deploy prep	READY	icon, OpenGraph, robots, sitemap, deploy-rangeclarity.md. Zero-config Vercel. Not deployed.
Payments / auth	MISSING	No Stripe/Whop, no accounts, no entitlements anywhere in the codebase.

Source: docs/project-state.md (HEAD 4297974). The hard asset exists; the gap is proof-of-value + a way to take money and grant access.

Broken / missing — and do not touch

● BROKEN / MISSING

- ✗ Live CTA posts to a dead **action="#"** — no conversion path
- ✗ No **payment** path (no Whop/Stripe)
- ✗ No **verified-access** model after purchase
- ✗ No **core value screen** / onboarding for a new buyer
- ✗ Indicator **not yet validated** (test matrix empty)
- ✗ Legal copy still says "**waitlist**", not paid beta

● DO NOT TOUCH THIS SPRINT

- The **homepage design** — no redesign (decision O-003 open)
- The **indicator internals** beyond validation notes (polish is Phase 3)
- **Live payments** — sandbox only, no real money
- In-app **Stripe / auth stack** — deferred (O-001)
- The **website brain** / scanner — Phase 4
- **Linear writes** — board stays the source of truth

Rule of the sprint: touch only what stands between a visitor and verified, understood, paid access. Everything else is explicitly out of scope.

Landing page + design system

pre-sprint

Core indicator built (Pine)

pre-sprint

Snapshot at sprint start. The **Now** column holds the two week-one gates (validate + price). Build tasks move through **In Progress** in dependency order; **Done** seeds with assets that already exist.

ICE scoring — impact × confidence × ease

#	TASK	IMPACT	CONFIDENCE	EASE	ICE	SCORING
1	Decide offer + price (O-002)	9	8	9	648	Each factor is rated 1-10. ICE
2	Point live CTA at the offer	6	9	9	486	GATES
3	QA the full flow	8	8	7	448	OVERRIDE ICE
4	Product docs + disclaimers	6	9	8	432	Validate indicator (RC-6)
5	Validate indicator (RC-6, gate)	10	8	5	400	highlighted on ease but is a hard gate —
6	Core value screen	9	7	6	378	sequence it first
7	Registration + access model	7	8	6	336	regardless of ICE. ICE
8	Verified-access logic	8	7	6	336	rank the rest.
9	Sandbox payment (Whop test)	9	7	5	315	

Funnel & access states

STATE 0-1 · VISITOR → REGISTERED

Form collects name, email, TradingView username, user type, and notes. State stored; no payment yet.

STATE 2 · TEST-PAID

Completes the **sandbox** checkout. Success + failure states both handled; no real money.

STATE 3 · APPROVED BETA

Verified access: TradingView invite-only grant + Discord role. Manual override available for fulfilment.

STATE 4 · ACTIVATED

Reaches the core value screen and applies the indicator. This is the activation metric the sprint exists to unlock.

What must finish before what

CRITICAL CHAIN

T3 Register → T4 Sandbox pay → T5 Verified access → T6 Core value. This is the spine; protect it.

GATES FEED IN

RC-6 (validate) and **O-002** (price) must resolve before pay + access are meaningful.

PARALLEL OK

T7 Docs can be drafted alongside T5-T6; QA (T8) needs the chain complete before it can run end-to-end.

Eighteen days, **exact**

Jun 20

Sat

● **AUDIT**

Inspect structure; map landing/auth/pricing/payment/docs/indicators; write current-state audit. No major design edits.

Jun 21

Sun

● **JOURNEY**

Map the user journey; define paid-beta flow + access states (visitor/registered/test-paid/approved); write acceptance criteria.

Jun 22

Mon

● **REGISTER**

Implement / clean registration flow; basic account + access model.

Jun 23

Tue

● **ACCESS MODEL**

Protected beta-page placeholder; persist access state.

Jun 24

Wed

● **SANDBOX PAY**

Add sandbox payment flow only (Whop test). No live payments.

Jun 25

Thu

● **PAY STATES**

Test-payment success / failure states + return handling.

Jun 26

Fri

● **VERIFY ACCESS**

Verified-access logic: test payment unlocks the beta area.

Jun 27

Sat

● **MANUAL OVERRIDE**

Simple admin / manual access override for fulfilment.

Jun 28

Sun

● **CORE VALUE**

Build core value screen: overview, sample ticker/watchlist, bias/score/state.

Jun 29

Mon

● **ONBOARDING**

TradingView indicator onboarding; "what this means / does not mean".

Jun 30

Tue

● **DOCS**

Product docs: what RangeClarity does; how to use the indicator.

Jul 1

Wed

● **DISCLAIMERS**

No-advice disclaimer; beta limitations; what users should test.

Jul 2

Thu

● **QA FLOW**

QA full flow: signup, sandbox payment, access, protected pages.

Jul 3

Fri

● **QA DEVICES**

Mobile + desktop basics; fix dead-ends and broken states.

Jul 4

Sat

● **POLISH**

Polish only what affects trust + comprehension; clarify copy.

Jul 5

Sun

● **TRIM**

Remove confusing sections; keep premium fintech feel.

Jul 6

Mon

● **CHECKLISTS**

Beta launch checklist; founder review checklist.

Jul 7

Tue

● **FINALIZE**

Next-sprint recommendation; finalize PDFs + handoff.

● JUN 20-21 AUDIT +
JOURNEY● JUN 22-25 REGISTER + SANDBOX

FINALIZE

Per-task acceptance

TASK	DEFINITION OF DONE
T1 · Repo audit	Current-state audit doc committed; landing/auth/pricing/payment/docs/indicators catalogued with evidence.
T2 · Journey + states	Documented flow + four access states (visitor/registered/test-paid/approved) with written acceptance criteria.
T3 · Registration	Form persists name, email, TV username, type, notes; basic account/access record created; protected beta-page placeholder exists.
T4 · Sandbox payment	Test checkout completes; success + failure states handled; no live keys; clear "sandbox" labelling.
T5 · Verified access	A test payment unlocks the beta area; manual/admin override works; access cannot be reached without payment + approval.
T6 · Core value screen	Overview + sample ticker/watchlist + bias/score/state explanation + TV onboarding + "what this means / does not mean".
T7 · Docs + disclaimers	What RangeClarity does, how to use the indicator, no-advice disclaimer, beta limitations, what to test.
T8 · QA full flow	Signup, sandbox payment, access, protected pages, mobile + desktop all pass with no dead ends.
T9 · Polish + T10 · Ship	Trust/comprehension copy clean; confusing sections removed; beta + founder review checklists complete; PDFs finalized.

Who runs what

TASK GROUP	OWNER	SUPPORT
Validate + price (gates)	Founder	Pine dev (validation), Claude (runbook)
Registration + access model	Full-stack	Founder (requirements)
Sandbox payment + access	Full-stack	Founder (Whop account)
Core value screen	Full-stack	Designer (1 day), Founder (copy)
Docs + disclaimers	Writer / Claude	Founder (no-advice sign-off)
QA + polish + ship	Founder + Claude	Designer (trust polish)

FREELANCER RECS

● Full-stack (Next.js/TS) — 0.5-0.8 FTE, the

HIRE DISCIPLINE

One full-stack dev — ~1 day for contractor carries this validation sprint. pass Everything else by Designer
No full-time, hire before the beta, validate demand.
● Writer — 2-3 days for docs + disclaimers

Where the danger sits

RISK LIST

- **Sandbox pay friction** — provider quirks; mitigate with a thin abstraction
- **Access can be bypassed** — test the gate explicitly in QA
- **Scope creep** into auth/brain — hold the line
- **Indicator not validated** in time — gates the sprint meaning
- **Mobile dead ends** — device pass in QA

POSTURE

Most items are low-risk quick wins. Concentrate care on sandbox payment + the verified-access gate.

Done means all of this

THE LOOP

- ☐ Visitor can read the offer and reach a working CTA
- ☐ Registration captures name, email, TV username, type, notes
- ☐ Sandbox checkout completes with success + failure handled
- ☐ Test payment unlocks the protected beta area
- ☐ Manual/admin access override works
- ☐ Core value screen renders sample structure + score + state
- ☐ TradingView onboarding path is clear

TRUST & CLARITY

- ☐ "What this means / does not mean" present on value screen
- ☐ No-advice + beta-limitation disclaimers visible
- ☐ No buy/sell, profit, or prediction language anywhere
- ☐ No dead `action="#"` forms remain
- ☐ Mobile + desktop pass with no overflow or dead ends
- ☐ `npm run build` + typecheck green
- ☐ Copy reads premium — clarity, not returns

The final gate

SHIP IF

- ✓ The full sandbox loop works end-to-end, no dead ends
- ✓ Verified access cannot be reached without pay + approval
- ✓ A new user grasps the value in under five minutes
- ✓ Disclaimers + no-advice language are intact
- ✓ Build + typecheck pass; mobile is clean

DO NOT SHIP IF

- ✗ Any step in the loop dead-ends or errors
- ✗ Access leaks without payment/approval
- ✗ Live payment keys are present anywhere
- ✗ Indicator value is still unproven (RC-6 open)
- ✗ Copy drifts into signals / profit / prediction

Most important sprint now: **prove the loop**. Land → register → sandbox pay → verified access → understood value. Everything else in the roadmap waits behind this evidence.
